Biliary complication	1.67 (0.38-7.38)	0.68			2.59 (0.73-9.13)	0.15	

BSIs, blood stream infections; IQR, interquartile range; CMV, cytomegalovirus; ICU, intensive care unit; PELD, pediatric end-stage liver disease; MELD, model for end-stage liver disease; OR, odd ratio; GRWR, graft to recipient body weight ratio; CIT, cold ischemic time; WIT, warm ischemic time; LT, liver transplantation.

a. Univariate (unadjusted) and multivariate (adjusted) ORs are presented.

b. P-value from the Fisher's exact test or Mann-Whitney nonparametric test; 95% confidence intervals are based on logistic regression.

c. P-value and 95% confidence intervals from multiple logistic regression.

d. PELD/MELD score was calculated only cholestatic liver disease (42 in BSIs group and 122 in non-BSIs group).
