

Supplemental Digital Content 6. Neonatal characteristics associated with the development of late-onset sepsis caused by *S. haemolyticus* in univariate logistic regression analysis

	Late-onset sepsis caused by <i>S. haemolyticus</i>	Odds ratio (95% CI)	
	No (n=43)	Yes (n=6)	in univariate analysis
Length of NICU stay – days; median (IQR)	16 (8.5-25)	28.5 (23.5-31)	1.18 (1.01-1.38)
Duration of treatment with beta-lactam antibiotics other than penicillin G – days; median (IQR)	8 (3-13.5)	14 (13-15.5)	1.18 (1.01-1.38)
Proportion of <i>S. haemolyticus</i> of all staphylococci			
In gut – %; median (IQR)	30 (13-45)	54 (41-74)	28 (1.06-743)
On skin – %; median (IQR)	13 (6-20)	53 (35-80)	134 (4.8-3737)

NICU – neonatal intensive care unit
