

Supplemental Figure 2. (A) Fundus photo (both eyes). Findings include submacular choroidal nevus with overlying drusen (right eye) and posterior vitreous detachment and epiretinal membrane with macular pucker (left eye). (B) Visual fields show a full field (right eye), and an inferior nasal step (left eye). (C) OCT macula and optic nerve shows significant macular pucker (left eye) and neuroretinal structural changes (left eye).
