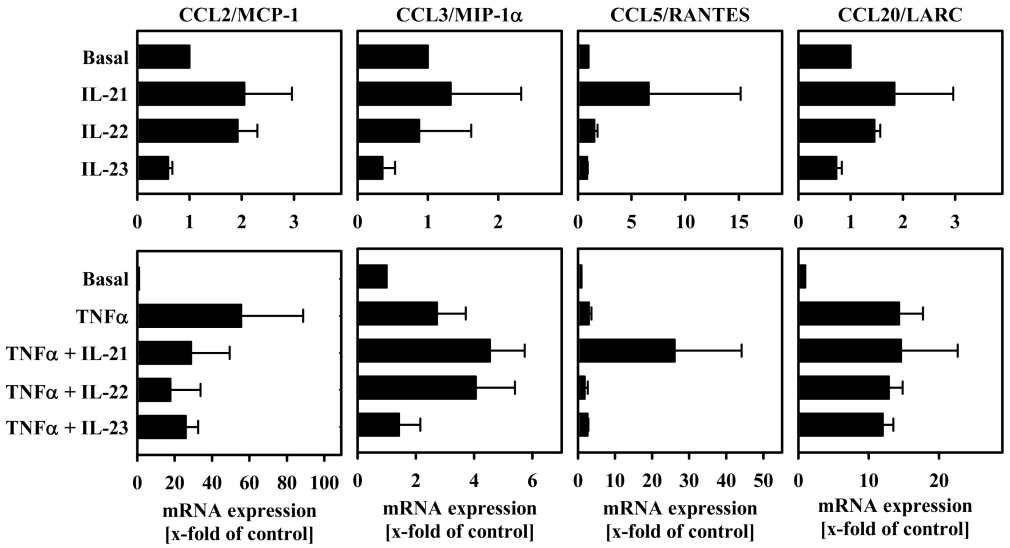
Supplementary Figure 3:
***In vitro* effect of IL-21, IL-22 and IL-23 on chemokine expression in mouse mesangial cells**



The expression of CCL2/MCP-1, CCL3/MIP-1α and CCL20/LARC was not significantly upregulated by IL-21 (10 ng/ml), IL-22 (10 ng/ml) and IL-23 (10 ng/ml) nor synergistically increased in the presence of TNFα. The expression of CCL5/RANTES, however, was significantly induced by IL-21 as well as by TNFα synergistically (n = 4).
