Adjustment the same as in Table 2

Demographic adjusted models are adjusted for age, sex, race, and site. Multivariable adjusted models include variables with p<0.05 in univariate models; demographics are forced in the model.

* adjusted for age, sex, race, site, htn, dm, LDL, HDL, serum albumin, any CV events, PVD, hsCRP, current smoker, cocaine use, BMI categories.

** additionally adjusted for albuminuria categories, hemoglobin categories

† adjusted for age, sex, race, site, htn, dm, LDL, HDL, high cholesterol, serum albumin, any CV events, PVD, hsCRP, and BMI categories.
