

### **Supplemental Figure Legends:**

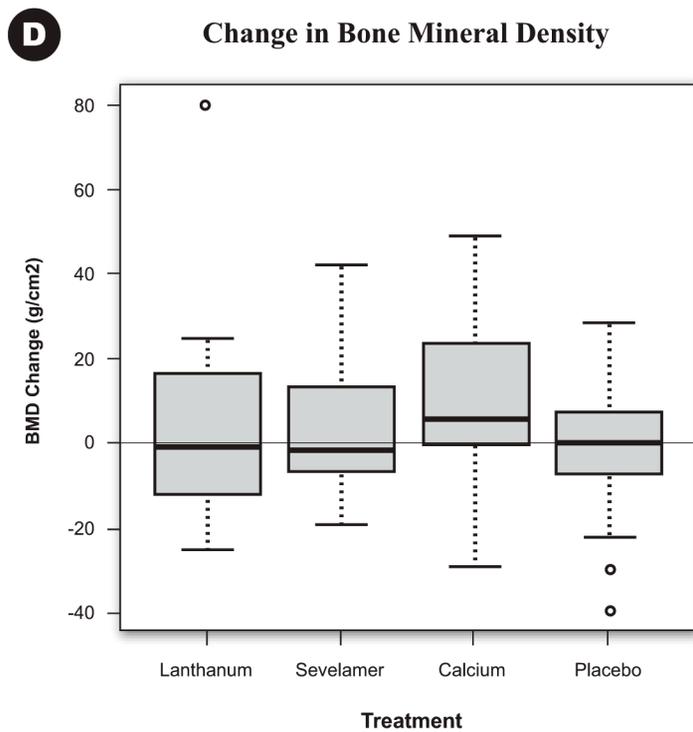

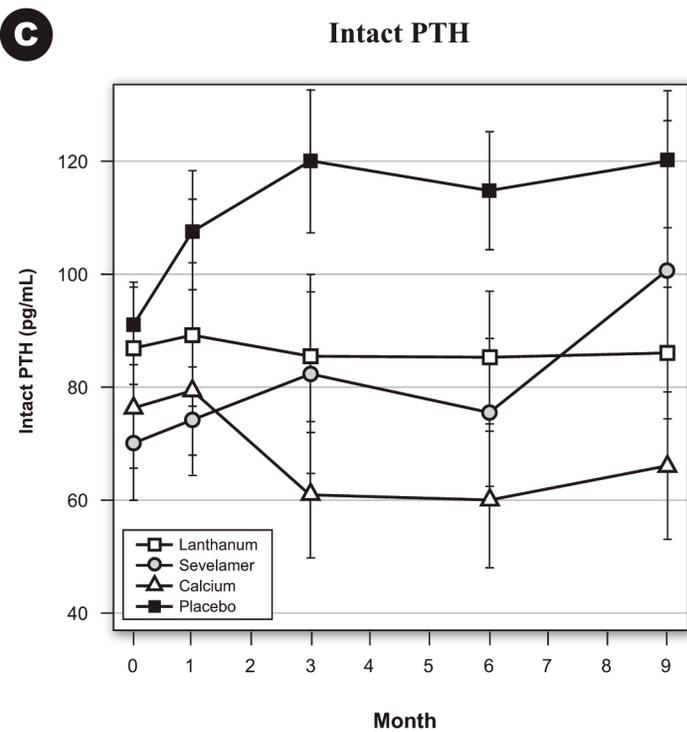

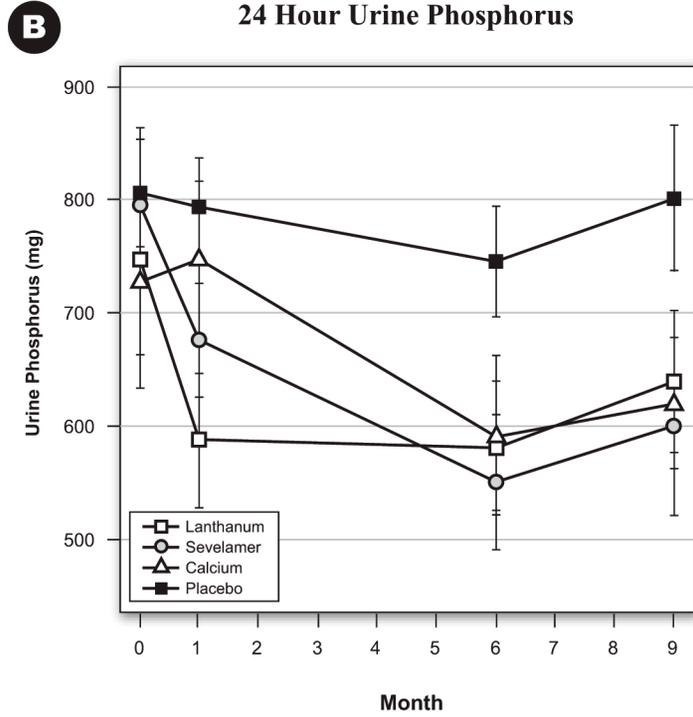

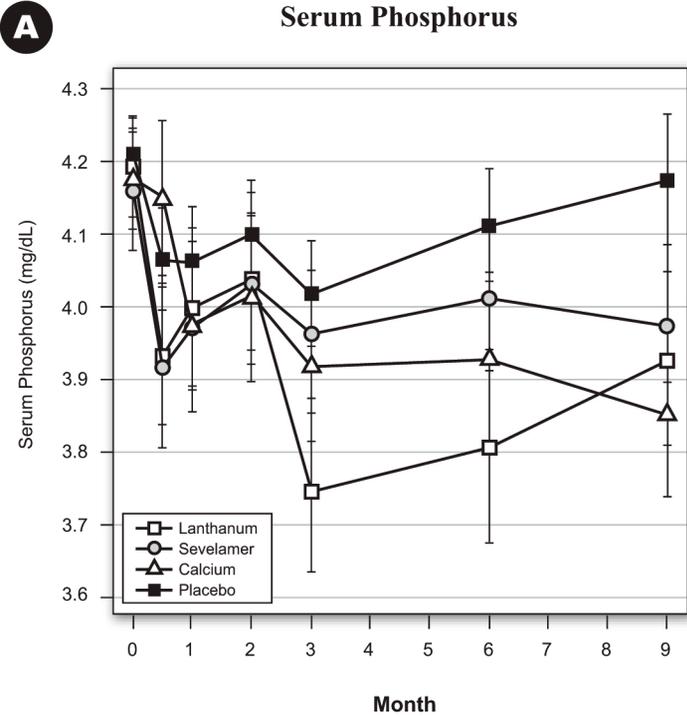

Figure 1: Mean (SE) serum phosphorus (panel A), 24 hour urine phosphorus (panel B), PTH (panel C), and median C-terminal FGF23 (IQR) (panel D) and intact FGF23 (IQR) (panel E) over the study period between each active and all placebo-treated patients. For intact FGF23, Wilcoxon rank-sum lanthanum versus placebo,  $p=0.30$ ; calcium acetate versus placebo,  $p=0.028$ ; sevelamer versus placebo,  $p=0.002$ .

Figure 2: Percent change in median (IQR) annualized total coronary artery (panel A), abdominal aorta (panel B), thoracic aorta (panel C) calcium volume scores among each active and all placebo-treated patients. Median (IQR) percent change in annualized bone mineral density among each active and all placebo-treated patients (panel D).
