Supplementary Figure S1. QQ Plot for Serum Parathyroid Hormone GWAS

Quantile-quantile plot showing observed p-values of the parathyroid hormone meta-analysis versus expected p-values by chance.

Supplementary Figure S2. Regional Association Plots

Regional association plot showing $-\log_{10}$ (p-values) for all SNPs ordered by their chromosomal position within all regions reaching p-values $< 5 \times 10^{-8}$ in the discovery screen, as well as the parathyroid hormone gene region. Each SNP is colored according to its correlation with the SNP showing the lowest p-value (index SNP) within the region as specified in the color scheme.
