

Supplementary Table 1: Hazard ratio for the association between 1 SD (2.56) increase in the Adapted Dietary Inflammatory Index (ADII) and the incidence rate of KFRT among 1,084 adults with CKD, using a competing risk model.

	Relative Hazard (95% CI)
Unadjusted	2.68 (1.84-3.55)
+ Demographics	2.19 (1.51-2.80)
+ Socio-economic Status	1.98 (1.41-2.61)
+ Physical Activity	1.85 (1.33-2.31)
+ Framingham Risk Score	1.72 (1.28-2.19)
+ eGFR+ ACR	1.55 (1.07-2.00)
