

Supplemental Figure 1. Bland–Altman plot showing the difference between URD_V and URD_H showing moderate variability. The mean difference was 0.030 (95% CI 0.002–0.058).

CI=confidence interval, SD=standard deviation, URD_H=upper esophageal sphincter relaxation duration on high-resolution manometry, URD_V=upper esophageal sphincter relaxation duration obtained on videofluoroscopic swallow study.
