Model			
Parameter estimates	Variable	Estimate	95% confidence interval
β_0	Intercept	-0.0046	-0.02 to 0.01
β_1	A : Age	0.0004	7.601e-006 to 0.0007
β_2	C : Pre pregnancy BMI	0.0001	-0.0002 to 0.0004
β_3	D : Gestational age	-0.0001	-0.0005 to 0.0002
Sig. diff. than zero?	Variable	t	P value
β_0	Intercept	0.589	0.6
β_1	A : Age	2.041	0.04
β_2	C : Pre pregnancy BMI	0.9393	0.4
β_3	D : Gestational age	0.757	0.5

Figure 1. Linear regressions and multivariable regression analysis.

Linear regression of normalized % change in FMD and (A) age (B) gestational age and (C) pre pregnancy body mass index. (D) Model of the multivariable regression analysis (least squares) between FMD responses, age, gestational age, and pre-pregnancy body mass index.
