Figure A2. Standard deviations (in log10 units) after the correction for learning. (A) Mean standard deviation (averaged across observers) as a function of print size for one-session within-design, five-session within-design, and five-session between-design conditions. (B) Standard deviation versus the number of blocks from which calculations are made. (C) Standard deviation<sub>non-learning</sub> (the amount of variation introduced by repeated measures at the group level excluding the variation resulted from learning) as a function of print size. (D) Standard deviation<sub>non-learning</sub> versus the number of blocks.
