

Supplementary table 1

Supplementary table 1. Analysis of factors associated with composite graft take using a multivariate logistic regression analysis in N=78 patients with N=78 complete fingertip amputations for which there was complete data in all categories*.

Factor	P value	OR	95% CI	reference
Time (<6, >6 hours)	0.347	0.438	0.078-2.449	>6 hours
Age (<4, >4 years)	0.091	4.321	0.793-23.539	>4 years
Bone exposed	0.084	3.562	0.845-15.013	exposed
Survival	0.020	5.508	1.306-23.218	Survived

β = partial regression coefficient, CI - confidence interval, OR = odds ratio, CI – confidence interval.

*This regression only included 78 out of the 81 complete fingertip amputations as data on bone exposure was missing in 3 patients.
