Manuscript: Richert et al. High frequency of poor locomotor performance in HIV-infected patients, ANRS CO3 Aquitaine Cohort

Table SDC1. Distribution of raw locomotor test results (n = 324), locomotor study, ANRS CO3 Aquitaine Cohort, 2007 – 2009

Locomotor test	N	Test results						
		Min	Q1	Median	Q3	Max	Mean	SD
Berg Score*	323	38	55	56	56	56		
Six-minute-walk distance (m)	309	165	500	550	613	760	554	83
Timed-up-and-go test (s)	324	4.1	5.1	5.6	6.4	24.4	6.0	1.7
Functional reach test (cm)	322	8	31	36	43	58	37	8
One-leg-standing (s)*	322	0.0	6.8	12.6	24.0	30.0		
Five-times-sit-to-stand test (s)	323	5.2	8.3	9.8	11.4	26.9	10.2	2.9

Note.- N: number of patients with valid test results. Min: Minimum. Q1: 25% percentile. Q3: 75% percentile. Max: Maximum. SD: standard deviation. * Mean and standard deviation are not shown if the raw data distribution does not approximate a normal distribution.
