Supplemental Digital Content Figure 1. Double negative T cells negatively correlated with CD8 T-cell activation level at month 6. (A) Relationship at M6 between the proportions of CD3⁺CD4⁺CD8⁻ DN T cells and CD8 T-cell activation, defined as the percentage of

CD8 T cells co-expressing CD38 and HLA-DR measured at M6. (B) Relationship at M6 between the proportions of CD3⁺CD4⁺CD8⁻ DN T cells and plasma HIV-1 RNA log₁₀ copies/mL. Spearman's rank correlation coefficients R and corresponding p-values are indicated on each panel
