

**Table S1. Results of Cox proportional hazards regression for likelihood of having a donor screened or approved among candidates listed after LDN program implementation (February 1, 2017) by participation status.**

|   | Sensitivity analyses |            |          |
|---|----------------------|------------|----------|
| <b>Donor screening</b>                  | aHR                  | 95% CI     | <i>P</i> |
| LDN participation                       |                      |            |          |
| Participated vs. interested             | 6.49                 | 3.42–12.32 | <0.001   |
| Participated vs. not interested         | 10.06                | 6.13–16.49 | <0.001   |
| Interested vs. not interested           | 1.55                 | 1.01–2.37  | 0.04     |
| Age at evaluation, per 10-year increase | 0.81                 | 0.72–0.91  | <0.001   |
| Male sex                                | 0.80                 | 0.62–1.04  | 0.09     |
| Race/ethnicity                          |                      |            |          |
| Caucasian                               | REF                  |            |          |
| African American                        | 0.37                 | 0.28–0.49  | <0.001   |
| Hispanic                                | 0.61                 | 0.24–1.56  | 0.30     |
| Other/unknown                           | 0.26                 | 0.12–0.55  | <0.001   |
| Time on dialysis, per 1-year increase   | 0.89                 | 0.83–0.95  | <0.001   |
| Married/partnered                       | 1.63                 | 1.25–2.12  | <0.001   |
|   |                      |            |          |
| <b>Donor approval</b>                   | aHR                  | 95% CI     | <i>P</i> |
| LDN participation                       |                      |            |          |
| Participated vs. interested             | 4.68                 | 1.44–15.23 | 0.01     |
| Participated vs. not interested         | 8.39                 | 3.57–19.75 | <0.001   |
| Interested vs. not interested           | 1.80                 | 0.74–4.35  | 0.20     |
| Age at evaluation, per 10-year increase | 0.87                 | 0.73–1.03  | 0.10     |
| Male sex                                | 1.82                 | 1.01–3.30  | 0.05     |
| Race/ethnicity                          |                      |            |          |
| Caucasian                               | REF                  |            |          |
| African American                        | 0.25                 | 0.13–0.48  | <0.001   |
| Hispanic                                | 0.76                 | 0.18–3.14  | 0.70     |
| Other/unknown                           | 0.37                 | 0.04–3.68  | 0.40     |
| Time on dialysis, per 1-year increase   | 0.84                 | 0.63–1.11  | 0.22     |
| Distance to UAB, per 25-mile increase   | 1.04                 | 0.99–1.09  | 0.14     |
| Married/partnered                       | 2.89                 | 1.60–5.22  | <0.001   |
