Continuous variables are reported as mean \pm SD or median (IQR). Groups were compared using one way ANOVA, Kruskal Wallis test or Chi-square test as appropriate. Obesity is defined as BMI >30 kg/m². *Abbreviations are:* ACE, angiotensin-converting enzyme; ARB, angiotensin-II receptor blocker; BMI, body mass index; RAAS=Renin-angiotensin-aldosterone system; CNI= Calcineurin inhibitor; °C, degree Celsius; CRP, C-reactive protein; BP, blood pressure; O2, oxygen; eGFR, estimated glomerular filtration rate
