| <b>Nonseroconversion, n (%)<sup>d</sup></b>                                | 836 (46.3)                            | 0.0                         | 124 (43.1)                               | 0.0                         | 358 (25.6)                                    | 0.0                         |

<sup>a</sup>Missing data in discovery cohort: Ethnicity (N=38); BMI (N=22); Smoking behavior (N=1); Use of alcohol (N=5); eGFR (N=375), Number of transplants (N=375); Time after transplantation (N=376); Living transplant (N=375); Use of steroids (N=389); Use of azathioprine (N=389); Use of MMF/MPA (N=389); Use of calcineurin inhibitor (N=389); Use of mTOR inhibitor (N=389); Primary renal diagnosis (N=590).

<sup>b</sup>Missing data in first validation cohort: Ethnicity (N=1); Smoking behavior (N=2); Use of alcohol (N=2); eGFR (N=1), Primary renal diagnosis (N=29).

<sup>c</sup>Missing data in second validation cohort: Ethnicity (N=27); BMI (N=15); Smoking behavior (N=1); Use of alcohol (N=4); eGFR (N=301), Number of transplants (N=301); Time after transplantation (N=301); Living transplant (N=301); Use of steroids (N=315); Use of azathioprine (N=315); Use of MMF/MPA (N=315); Use of calcineurin inhibitor (N=315); Use of mTOR inhibitor (N=315); Primary renal diagnosis (N=481).

<sup>d</sup>Nonseroconversion was defined with a level of SARS-CoV-2 spike S1-specific IgG antibodies of <50 BAU/mL (anti-SARS-CoV-2 RBD IgG ELISA assay) after the second vaccination in the discovery cohort or third vaccination in the second validation cohort and <10 BAU/mL (fluorescent bead-based multiplex immunoassay) after the second vaccination in the first validation cohort.

*Abbreviations are:* BMI, body mass index; eGFR, estimated glomerular filtration rate; MMF/MPA, mycophenolate mofetil/mycophenolic acid; mTOR, mammalian target of rapamycin

**Table S2.** Descriptive statistics of inclusion and exclusion cohort

Abbreviations are: MMF/MPA, mycophenolate mofetil/mycophenolic acid; eGFR, estimated glomerular filtration rate; BMI, body mass index; mTOR, mammalian target of rapamycin; CI, confidence interval

## Supplemental figures

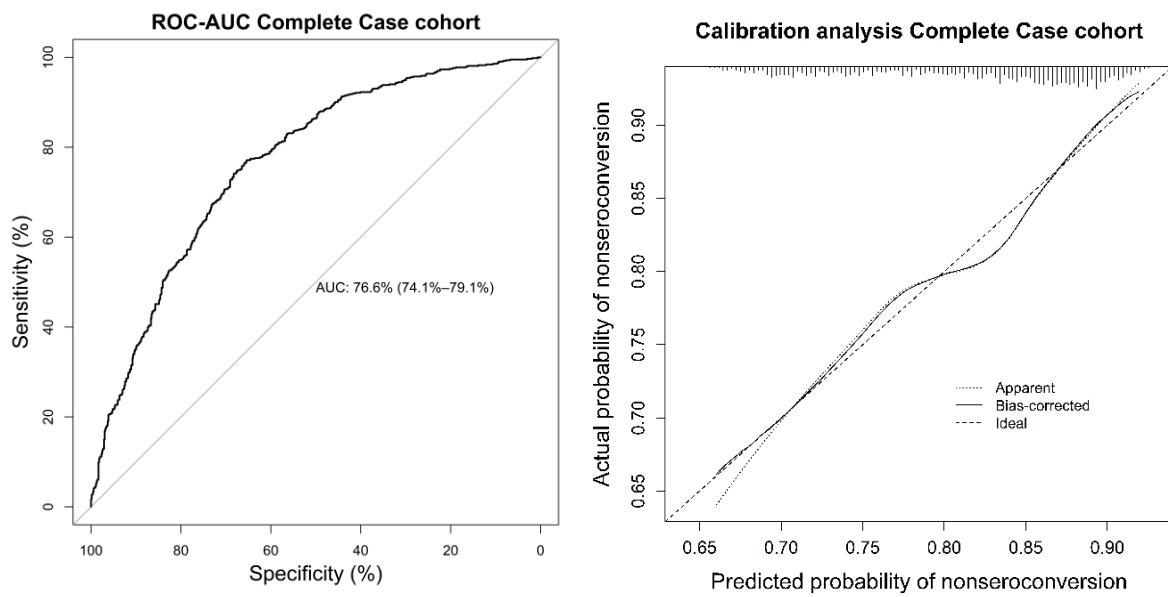

**Figure S1.** The continuous, linear predictors plotted against the probability of nonseroconversion to SARS-CoV-2 vaccination in KTR. (A-D) In all 4 models we used 3-knot restricted cubic spline analysis, corresponding to an age of 59 years, BMI of 25 kg/m<sup>2</sup>, no alcohol use, no diabetes mellitus, chronic lung disease or heart failure, first KTx, 8 years after KTx, eGFR of 51 mL/min/1.73m<sup>2</sup>, MMF/MPA use, calcineurin inhibitor use and no mTOR inhibitor use. (E-F) In this model we used 3-knot restricted cubic spline analysis, corresponding to a probability of nonseroconversion of 0.54.

Abbreviations are: SARS-CoV-2, Severe Acute Respiratory Syndrome Coronavirus-2; KTR, kidney transplant recipients; MMF/MPA, mycophenolate mofetil/mycophenolic acid; mTOR, mammalian target of rapamycin; eGFR, estimated glomerular filtration rate; KTx, kidney transplantation; BMI, body mass index

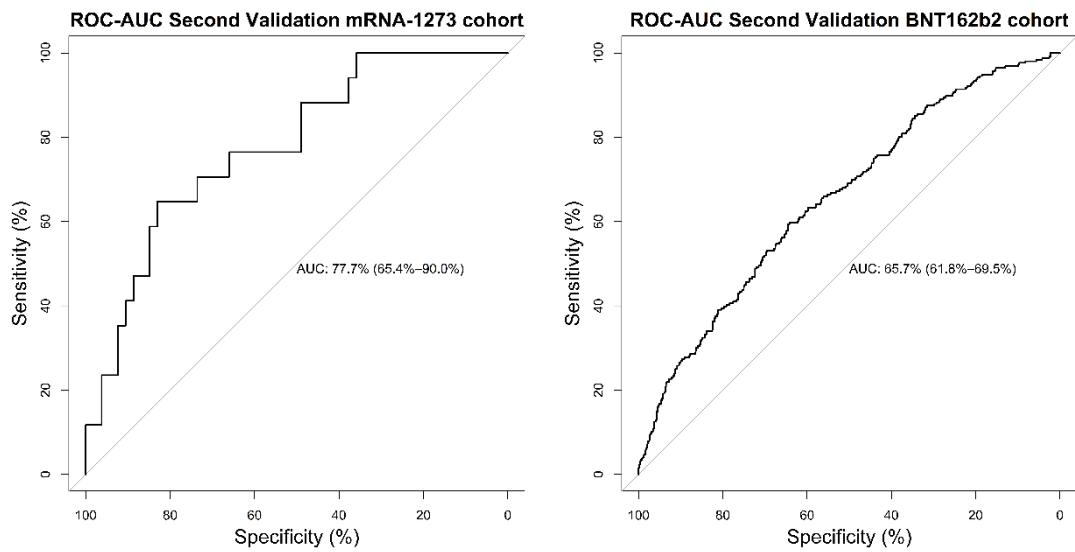

**Figure S2.** The binary, linear predictors plotted against the probability of nonseroconversion to SARS-CoV-2 vaccination in KTR.

*Abbreviations are;* SARS-CoV-2, Severe Acute Respiratory Syndrome Coronavirus-2; KTR, kidney transplant recipients; MMF/MPA, mycophenolate mofetil/mycophenolic acid; KTx, kidney transplantation; mTOR, mammalian target of rapamycin

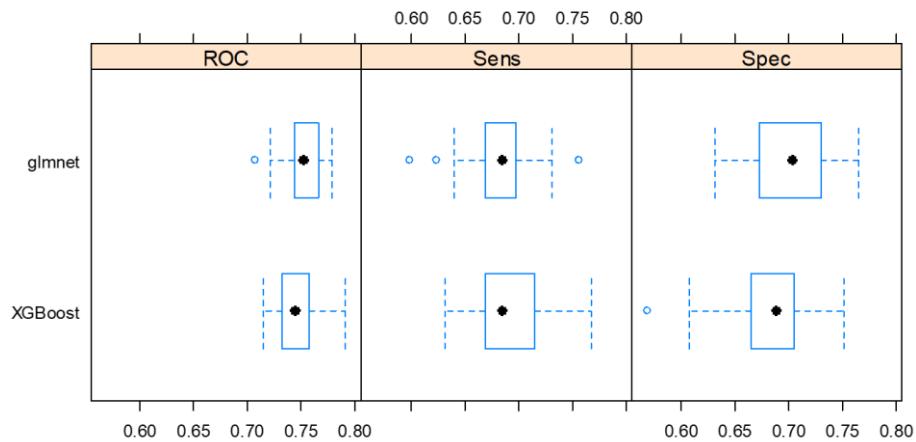

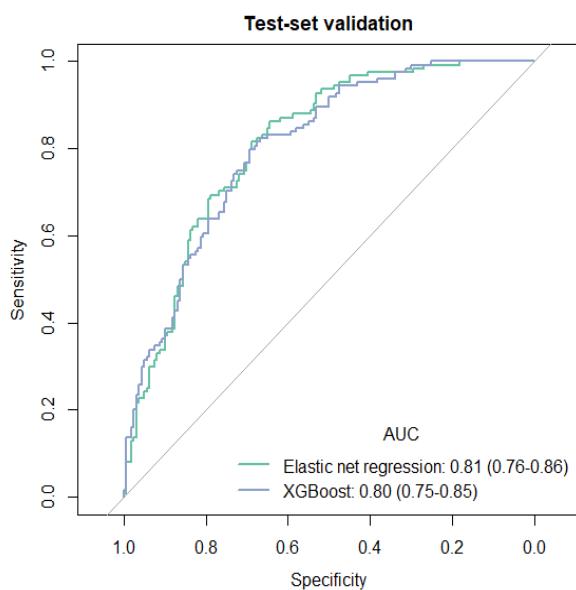

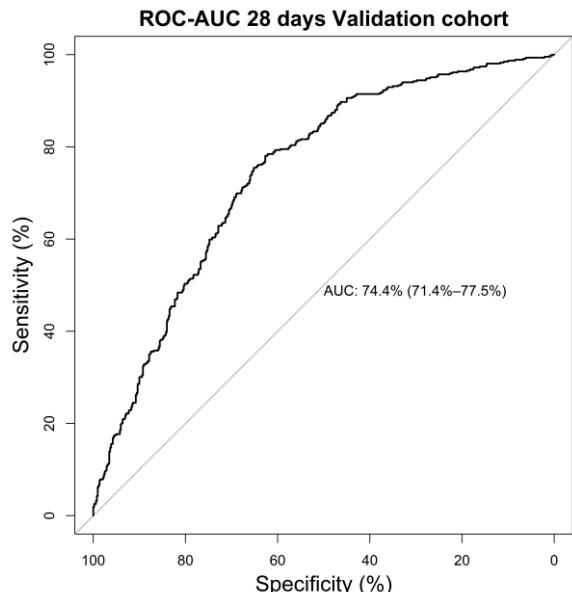

**Figure S3.** Performance and calibration of the complete case cohort (N=1362).

Abbreviations are: ROC, Receiver Operating Characteristic; AUC, area under the curve

**Figure S4.** Performance of the final model in KTR who received a third vaccine dose with mRNA-1273 (N=96) or BNT162b2-mRNA (N=1262).

Abbreviations are: ROC, Receiver Operating Characteristic; AUC, area under the curve; mRNA, messenger ribonucleic acid

**A****B****C**

**Figure S5.** (A-B) Sensitivity analysis with machine learning. One statistical model with L1-L2 penalization, Elastic-net Generalized Linear Model (GLMnet). One method with Extreme Gradient Boosting (XGBoost). (A) Comparison of 2 models in the discovery set ( $N=1804$ ) (GLMnet vs XGBoost) after 10 repeats of 4-fold cross-validation. Discrimination of all outer-folds plotted. AUC GLMnet: 0.7534, AUC XGBoost: 0.7454. (B) Discrimination of 2 alternative prediction models (GLMnet vs XGBoost) in the first external validation cohort ( $N=288$ ). (C) Performance in a cohort including immune response measurements at  $28 \pm 3$  days after the second vaccination ( $N=989$ ).

Used packages: caret, glmnet, xgboost

Abbreviations are; AUC, area under the curve; ROC, receiver operator characteristics
